Ceramic Heat Emitters

The Reptile One Ceramic Heat Emitters are used in the place of light emitters to provide natural sun like heat.

The Ceramic Heat Emitters can be used to establish an appropriate environment temperature range for reptiles.

Standard E27 screw fitting.

Suitable for: Reptiles and Amphibians Invertebrates

FEATURES & BENEFITS:

- Emits heat without light
- The Ceramic Heat Emitters produce no light which makes them more energy efficient than globes of the same wattage
- The Ceramic Heat Emitters are a radiant heat source which creates a natural sun like heat and does not disturb normal day/night time cycle
- The flat shape sees a wider heated area

NOTES, HINTS & TIPS:

- Reptile One recommend using the Ceramic Heat Emitters with the Reptile One Ceramic Socket (#46548)
- When changing the heat lamp, be sure to let the Ceramic Heat Emitter cool down before handling
- The Ceramic Heat penetrates the scales and skin tissue, promoting health and healing as it widens the blood vessels and increases blood circulation
- Ensure Reptiles/Amphibians are not able to touch the surface of the ceramic emitters as they can burn easily

WARNING AND DISCLAIMERS:

- CAUTION Do not touch lamp while switched on
- Allow to cool before attempting to remove lamp from socket
- When replacing lamp ensure the unit is switched off
- Ensure animal cannot come in contact with heat lamp
